🇬🇧 MACHINE MULTIPLE STATIONS: FOOT MOD & PNEUMATIC MOD

Pedal-driven machine equipped with 6-stations set tools holder. Pedal-driven machine equipped with two rotary capstan units, upper and lower carrying six different tools suitable for: punching or applying eyelets, rivets, buckles, hooks, pressure-buttons and other metal pieces used in the several productions. The knee-pad of this machine is perfectly balanced with the treadle, thus allowing the operator to get a very high pressure power just pressing lightly the treadle, the two rotary 6-station units allow to carry out different articles only rotating the wheels as the 6 set tools are ready to work each one for its size or ornament.. **Available on pedal valve, pneumatic system also.** Upper with thread 1/4 x 24 Lower with hole from mm 12,2 It is possible to set any tool generally used for manual presses. By request it is possible to supply the machine with an optical search- light. Metallic table. Steel bench adjustable in height.
