

## PRODUCT DESCRIPTION:

The **AV2 NET** is the most technologically advanced model of **FAV** skiving machines, a 4.0 machine with innovative features:

- **LEAN PRODUCTION:** The possibility to use all feet in the **FAV** catalogue makes the **AV2 NET** the most flexible electronic skiving machine in the world (maximum skiving width: 45 mm). Thanks to the microprocessor, it is possible to organise production in programs (unlimited number of skivings for each program) or in different processes with automatic calculation of parameters like angle, width, thickness and speed.

- **4.0 READY:** The updated electronic components allow remote control and to transfer the work parameters from the machine to the office and from the office to the machine.

- **ITALIAN QUALITY:** The design, coding and production of **AV2 NET** are **100% MADE IN ITALY®**.

The new design allows to obtain higher performances than any other product: the power and the speed of the new transport system, the last generation PC HMI, the customization (9,7" screen version available) and the precision of the new sharpening system are some features that make **AV2 NET** a new landmark in the market.

These new features must be added to traditional strenghts of **FAV** machines: extreme immediacy, ease of use and reliability of a product that has been proven over time for more than 75 years.

**MADE IN ITALY**

## TECHNICAL DATA:

Dimensions: 120 x 60 x 125 cm

Net weight: 163 kg

Feed roller speed: 0-84 m/min

Bell knife speed: 600-2000 RPM

Power consumption: 1,5 kW
